

Appendix B | Service providers and data

SENSATE ORIGIN DESIGN SERVICES - FZCO

For IT review. Technical disclosure, not a certification or a contractual SLA. Source: the current /security disclosure. No customer records are included.

Scope

Providers receive data only when their feature is used. This inventory describes processing paths. Retention, training terms, account-level opt-outs and contractual sub-processor status have not been independently verified for this export; check applicable vendor terms before sending sensitive information.

Railway

Hosting and storage: workspace records and files on the per-site data volume in region sfo. No automated volume backups yet; the data volume is b0778ac2 on Railway; restore = redeploy from git + this volume. A lost volume cannot be recovered through redeploy.

OpenAI, Anthropic, Google Gemini, Perplexity, xAI

AI visibility research. Data sent: Buyer questions, business context and location.

Anthropic

Advice and writing. Data sent: Relevant workspace context, instructions, conversation and attachments you supply.

SerpApi, Firecrawl

Search, listings and public-page research. Data sent: Search terms, locations and public URLs; retrieved page content is saved.

Higgsfield, HeyGen, Google Gemini

Images, video and narration. Data sent: Scripts, prompts, reference images or URLs, selected avatar and voice.

Google, WordPress, Webflow and other selected integrations

Connected tools. Data sent: Credentials or OAuth tokens and the requests needed for the feature; approved content when publishing.

Outseta, Stripe, Resend

Account, payment and email. Data sent: Account identity, billing details or the recipient and message being sent.

Connected creative and messaging tools

Canva and Figma use per-site OAuth connections for selected assets and API requests. Adobe Express receives the asset opened in its embedded editor; saved output returns as a new asset version. Meta receives recipients and approved content for configured WhatsApp and social operations; LinkedIn receives approved posting content. Connection and approval are required; availability does not mean a workspace has connected these services.

Account-specific policy checks

This export does not assert that HeyGen, Higgsfield, Gemini or xAI exclude all content from training. Confirm the account terms and opt-out status before using client material. The ANSR pilot must not use avatar/video generation on its material until that confirmation is recorded.
